Elements 103 to 118

added by Tom Lehrer in 2020

*Coper*micium, meitnerium, nihonium, moscovium,
*Ruther*fordiuim, seaborgium, roentgenium, flerovium,
Darmstadtium, lawren*cium*, oganesson, livermoriuim,
And tennessine and hassium and dubnium and bohrium.

This will scan with only three deviations from the original music. The first two syllables of *coper*micium and *ruther*fordium and the last two syllables of lawren*cium* must each be sung as two sixteenth-notes, rather than as one eighth-note.

Note: the preferred primary accent in oganesson is on the third syllable (ness), although there is disagreement about this.
